

JOB ORDER AND BOOKING SYSTEM

Proposed Project Features

ESSENTIAL FEATURES AND USE CASES

1. Customer Relationship Management (CRM)

Description: This feature will provide a way to record and manage the lifecycle of Busy Bee customer records. Under this feature, the following tasks can be performed:

- a. Search customer records using pre-defined filters.
- b. View the list of customer records.
- c. Create and delete individual customer records.
- d. View and update customer data such as contact details, addresses, etc.
- e. View and update the customer's current stage within the company-defined customer life cycle.
- f. Activate/de-activate individual customer records.
- g. View the quotation and service histories for each customer.
- h. View the balance and payment status for each customer.
- i. Capture referral information, if any, for each customer.
- j. Manage customer-level pricing and discounts for each customer.
- k. Add notes for each customer record.
- l. Send emails to each customer record.
- m. View an audit trail for each customer record.

2. Quotation Management

Description: This feature will provide a way to record and manage job inquiries and/or transactions from Busy Bee customers. Under this feature, the following tasks can be performed:

- a. Search quotation records using pre-defined filters.
- b. View a list of quotation records.
- c. Create, view, and update quotation records.
- d. Implement an approval process for quotations in line with company policies.
- e. Record payments against each quotation.
- f. Capture sales personnel data on each quotation record.
- g. Send an email containing quotation details to the related customer.

- h. View an audit trail for each quotation record.

3. **Service/Dispatch Management**

Description: This feature will provide a way to manage the service dispatch calendar for Busy Bee teams. Under this feature, the following tasks can be performed:

- a. View the schedule of confirmed service bookings for each day.
- b. View past and future schedules by providing a way to navigate the dispatch calendar by date.
- c. Remove service bookings from the calendar.
- d. Manage team members assigned to each service booking.
- e. Update the date and time of each service booking.

4. **Employee Management**

Description: This feature will provide a way to record and manage individual Busy Bee employees. Under this feature, the following tasks can be performed:

- a. Search employee records using pre-defined filters.
- b. View the list of employee records.
- c. Create and delete individual employee records.
- d. View and update employee data such as contact details, addresses, etc.
- e. Activate/de-activate individual employee records.
- f. Add notes for each employee record.
- g. View an audit trail for each employee record.

5. **Team Management**

Description: This feature will provide a way to record and manage Busy Bee service teams. Under this feature, the following tasks can be performed:

- a. View the list of service teams.
- b. Create and delete team records.
- c. Add/remove service team members.
- d. Activate/de-activate service team records.

- e. Add notes for each service team record.
- f. View an audit trail for each service team record.

6. Reporting

Description: This feature will provide a way to view the pre-defined reports, as well as to create and manage custom reports. Under this feature, the following tasks can be performed:

- a. View the list of pre-defined reports.
- b. Create/update custom reports.
- c. Setup dashboard reports for each employee role.
- d. Export report data in CSV, Excel, or PDF format.
- e. View an audit trail for each custom report.

7. Company Settings Management

Description: This feature will provide a way to manage company-wide settings. Under this feature, the following tasks can be performed:

- a. Company/Business Details
- b. Location Management
- c. Accounts Management
- d. Accounting Period Management
- e. Roles and Permissions Management
- f. Lists Management
- g. Custom Fields
